## How to design web site layout

### 1. Website mode selector

- Select your front-end website mode
- Web Site : Contents management
- Catalog : Show your product
- Ecommerce : Sell your products

### 2. Website layout

- Define your front-end website framework

### 3. Main menu navigator position

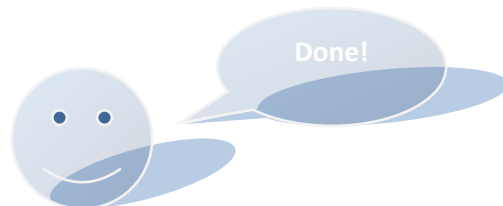

- Define your main menu navigator position & styles. Horizontal style and Vertical style are available.

### 4. Component & Widget selector

- Select the component what you want to display on front-end. There are 2 types of components. Side layout component and main page layout component. Position change also available.

### 5. Frame design maker

- You can define template's frame design, margin each layout.

## Website layout and Frame

### 1) Website layouts

According to “design configuration” menu, you can define following types of layouts.

Please input Left Frame, Center Frame, Right Frame size, it will be kept total websites as the templates. But in the case of the product pages and contents pages, you will see the full size contents area (Center frame area + Right frame area)

#### [6 types of basic layout ]

Top		
Main menu		
L Frame	C Frame	R Frame
Bottom		

Top	
Main menu	
L Frame	C Frame
Bottom	

Top	
Main menu	
C Frame	R Frame
Bottom	

Top	
Main menu	
C Frame	
Bottom	

Top		
Main menu	C Frame	R Frame
L Frame		
Bottom		

Top	
Main menu	C Frame
L Frame	
Bottom	

### 2) Website background

You can define the background for your website using color code or image files (jpg, png, gif).
